

# AIR HEATING VAPORIZER

100Kg/h – 1,500 Kg/h

**FOR LPG**

## The features of SR series

- ◇ There is no running cost of electricity bill.
- ◇ Does not emit CO<sub>2</sub>.
- ◇ Provides a stable gas supply.
- ◇ It has excellent durability.

# The Reason Why the vaporizer Is Needed

- ✓ It uses heat of atmosphere (Air) to heat up. Heat source such as electricity or gas not required.
- ✓ High initial investment is required, electricity cost is NOT needed.
- ✓ It is unaffected by blackouts.
- ✓ It contributes to global environment protection. Emit no CO<sub>2</sub>

- **No-running cost !**

These types vaporizers are very economical because they don't need initial cost for heat source and running cost for vaporizing (LPG)

- **Extremely long life !**

The material of these vaporizers body is aluminum alloy. This material is good efficiency of heat transfer and durable. The lifetime is semi permanent.

- **No-rusting!**

The material of these vaporizers control box is stainless steel. It doesn't corrode and keeps beautiful luster for a long time.

# Safety and reliable design

- **Preventing liquid-spill**

It prevents LPG from spilling out to gas supply system absolutely by the means of Ito Koki original sensing temperature system.

- **Easy operation and maintenance**

The control section is driven by own gas pressure, no electricity or air pressure is needed for its operation. You can easily operate and maintain it. Even if power failure happens, they can keep gas supply stably.
